

Deworming Protocol

Foal (1 month-12 months)

- ✓ Administer paste every month
- ✓ Rotate between fenbendazole (ex. Panacur/Safe-guard), pyrantel pamoate (ex. Strongid paste) and oxbendazole (Anthelcide)

OR

- ✓ Strongid C daily dewormer (once the foal is weaned and eating well)

* Do NOT give ivermectin (ex. Equell, Zimectrin, Equimax, Eqvalan) or moxidectin (ex. Quest, ComboCare) until the foal is at least six months of age.
